

Fix Error Of “The SMTP server requires a secure connection”

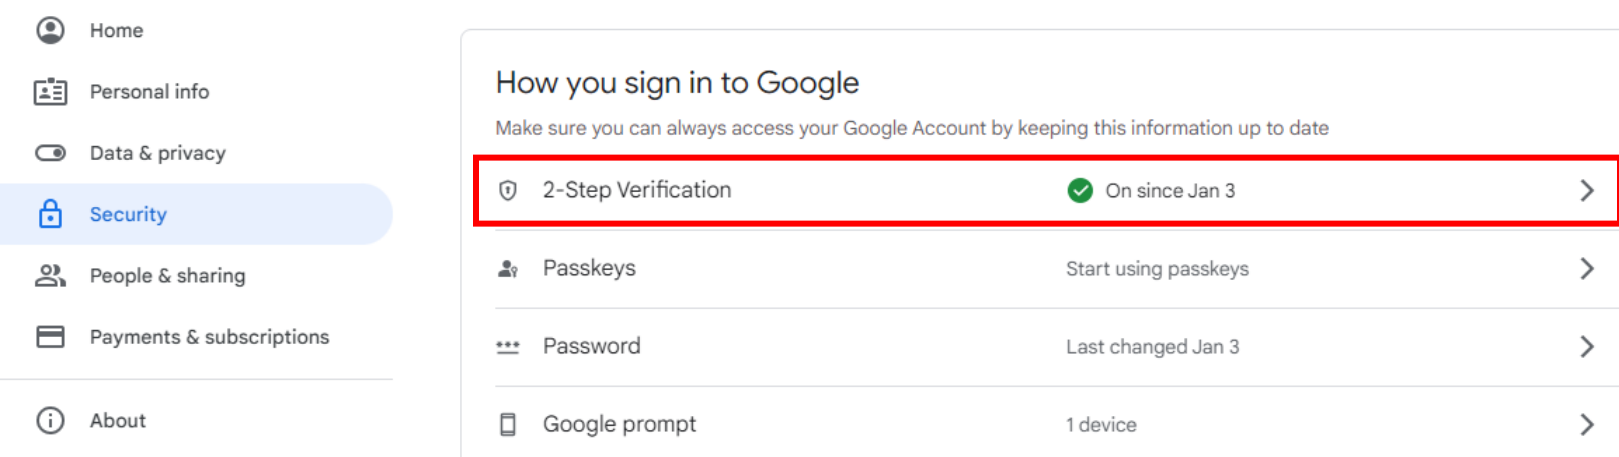

If you use Gmail, you may occur some error because Google don't access external login. One of the most popular way to solve this Problem is to turn on less secure app access. But recently it can't help you. So I've found a way to solve this problem.

First go to your Google Account Management, Then Go to Security tab :

The screenshot shows the Google Account Security page. The left sidebar contains navigation options: Home, Personal info, Data & privacy, Security (highlighted with a red box), People & sharing, Payments & subscriptions, and About. The main content area is titled 'Security' with the subtitle 'Settings and recommendations to help you keep your account secure'. A card titled 'You have security tips' is displayed, with the text 'Security tips found in the Security Checkup' and a 'Review security tips' link. The card also features an illustration of a smartphone, a shield with a checkmark, and a password field.

Now you have to enable your 2-step verification:

The screenshot shows the Google Account Security page, specifically the 'How you sign in to Google' section. The left sidebar is the same as in the previous screenshot, with 'Security' highlighted. The main content area is titled 'How you sign in to Google' with the subtitle 'Make sure you can always access your Google Account by keeping this information up to date'. A table lists various sign-in methods:

2-Step Verification	On since Jan 3	>
Passkeys	Start using passkeys	>
Password	Last changed Jan 3	>
Google prompt	1 device	>

The '2-Step Verification' row is highlighted with a red box.

After turn on 2-step verification you may go to down of the page 2-step verification and go to App password:

← 2-Step Verification

Devices that don't need a second step

You can skip the second step on devices you trust, such as your own computer.

Devices you trust

Revoke trusted status from your devices that skip 2-Step Verification.

[REVOKE ALL](#)

App passwords

App Passwords aren't recommended and are unnecessary in most cases. To help keep your account secure, use "Sign in with Google" to connect apps to your Google Account.

App passwords

2 passwords

Now you may choose "Other (Custom Name)" from Select app and then click on generate:

← App passwords

App passwords let you sign in to your Google Account from apps on devices that don't support 2-Step Verification. You'll only need to enter it once so you don't need to remember it. [Learn more](#)

Your app passwords

Name	Created	Last used	
Visual Studio (2)	Jul 16	Jul 16	
Visual Studio	Jan 3	Jan 3	

Select the app and device you want to generate the app password for.

Select app

Select device

GENERATE

Finally it shows a windows that contain a password you have to copy it and use it in your program instead of your password account:

Generated app password

Email
securesally@gmail.com

Password
●●●●●●●●●●

Your app password for your device

uij . . . mo

How to use it

Go to the settings for your Google Account in the application or device you are trying to set up. Replace your password with the 16-character password shown above. Just like your normal password, this app password grants complete access to your Google Account. You won't need to remember it, so don't write it down or share it with anyone.
